EDUCATION

University of British Columbia

Sep 2020 – Apr 2026

Bachelor of Applied Science in Integrated Engineering

EXPERIENCE

Miru Smart Technologies

May 2024 – Aug 2024

Systems Integration Intern

Vancouver, B.C.

- Reduced mixed-signal PCB size by over 60% in a 6 layer design using a BGA System on Module
- Wrote C modules in Zephyr to drive electrochromic windows, increasing transitioning frequency by 1.5 times
- Devised a custom compilation pipeline using CMake and linker scripts for an ARM64 target

Sarcomere Dynamics

May 2023 – Apr 2024

Electrical and Firmware Engineering Intern

Vancouver, B.C.

- Implemented embedded C firmware with a finite state machine to control actuators in a multi-DOF robotic hand
- Redesigned three PCBs with emphasis on USB-C integration, mixed-signal routing, and power delivery
- Developed modular C++ classes and extended a custom Python API to support wireless communication via Wi-Fi
- Performed reflow soldering, signal probing, and hardware bring-up for embedded prototypes

PROJECTS

CheckMATE - Robotic Chessboard | Code | Report

Sep 2024 – Apr 2025

- Designed custom PCBs and cable assemblies for a multiplexed Hall effect sensor grid to detect chess piece positions
- Selected stepper motors and drivers; configured and compiled a custom GRBL build for an H-bot gantry
- Developed hardware abstraction layers and implemented a backend algorithm for sensor polling and state detection

Helmet HUD - Mountable Heads Up Display | Code | Report

Oct 2022 – Apr 2023

- Engineered an ESP32-based control unit to interface with UBC Formula E's CAN bus
- Displayed real-time telemetry (speed, temp, lap time) on an I2C OLED using FreeRTOS task scheduling
- Designed a compact custom PCB integrated into a 3D-printed helmet-mounted enclosure

Barmaid - Automated Drink Dispenser | Code | Report

Nov 2021 – Apr 2022

- Constructed a custom beverage dispenser using CNC-milled aluminum and a 3D printed nozzle
- Controlled dosing system with solenoid valves and load cell feedback for precision pouring
- Wrote firmware for automated calibration, stepper control, drink selection and dispensing, and LCD user interface

ENGINEERING DESIGN TEAMS

Open Robotics

Sep 2024 – Present

Grippers Team Lead

University of British Columbia

- Directed the full-cycle development of a parallel gripper end effector for the RoboCup@Home competition
- Managed a cross-disciplinary team of eight from initial design and prototyping to system integration

Supermileage

Sep 2022 – Aug 2023

Electrical Team Member

University of British Columbia

- Redesigned and assembled a custom PCB leveraging analog sensors to detect faults in a hydrogen electric FSAE car
- Competed and won 2023 SEMA competition in the hydrogen fuel cell category at the Indianapolis Motor Speedway

TECHNICAL SKILLS

Operating Systems: Linux (Arch, Ubuntu, Raspbian), Windows, macOS, FreeRTOS, Zephyr

Programming Languages: C/C++, Python, JavaScript, HTML, CSS, MATLAB, R, Bash scripting

Hardware Design: Circuit design/analysis, PCB layout (Altium, KiCad), FPGAs, VHDL, Multisim

Mechanical Design: Fusion 360, Onshape, SolidWorks, Orca Slicer

Tools & Instrumentation: Oscilloscopes, Logic Analyzers, Function Generators, Soldering (reflow & hand)

LANGUAGES

French (Working Proficiency), Portuguese (Bilingual Proficiency), Spanish (Working Proficiency)
